## ***How Much Liner Do I Need?***

The answer to this question is simple once you have the formula. After your water garden has been dug, take a flexible tape measure and stretch it across the greatest length of the water garden. Repeat this process with the greatest width. Then measure your deepest depth. If you have any combination of streams, waterfalls or ponds, a set of measurements must be taken for each additional feature.

Take your measurements and plug them into the following equation. Remember, this calculation must be done for each feature (stream, waterfall & pond) in your water garden.

**Maximum Length** \_\_\_\_ + **(Two times Maximum Depth)** \_\_\_\_ + **2 Feet\*** = **Total Length** \_\_\_\_

**Maximum Width** \_\_\_\_ + **(Two times Maximum Depth)** \_\_\_\_ + **2 Feet\*** = **Total Width** \_\_\_\_

\*Allows for 1 foot overlap around the entire edge so liner can be anchored with edging of rock, pavers, etc.

**Total Length** \_\_\_\_ X **Total Width of Liner** \_\_\_\_ = **Total Square Feet of Liner** \_\_\_\_

Use the Total Length and Total Width amounts when ordering your liner from us. To determine the cost of the liner, multiply your **Total Square Feet** by the appropriate price.
